

The Automated Load Controller of Emacx Systems is a powerful tool to Demand / Load Control. The highly sophisticated software allowed us to parameterize every load carefully and therefore we had no complaints regarding load curtailment during the hottest days of the year. That is very important for a Hotel especially when it comes to HVAC. In terms of pay back its one of the most successful projects I have dealt with. We saved \$11,000 in the first 12 months.
